

Exercise :

Q1

$$x(A) =$$

$$\frac{n(A)}{n(A) + n(B)}$$

$$\frac{m(A)}{m(A)}$$

$$\frac{m(A)}{m(A)}$$

$$= \frac{\frac{m(A)}{m(A)} + \frac{m(B)}{m(B)}}{\frac{m(A)}{m(A)} + \frac{m(B)}{m(B)}}$$

$$\frac{\frac{m(A)}{m(A)} + \frac{m(B)}{m(B)}}{\frac{m(A)}{m(A)} + \frac{m(B)}{m(B)}}$$

$$\frac{w(A)}{m(A)}$$

$$= \frac{\frac{w(A)}{m(A)} + \frac{1-w(A)}{m(B)}}{\frac{w(A)}{m(A)} + \frac{1-w(A)}{m(B)}}$$

$$\frac{\frac{w(A)}{m(A)} + \frac{1-w(A)}{m(B)}}{\frac{w(A)}{m(A)} + \frac{1-w(A)}{m(B)}}$$

$$w(A) = 0.8$$

A.N: $x(A) = 0.56$

Q2. Fusion arithmétique $\Rightarrow$ congruente

$$w(C) = 1 - w(B) = 0.55$$

$$x(C) = \frac{\frac{w(C)}{m(C)}}{\frac{1-w(C)}{m(B)} + \frac{w(C)}{m(C)}}$$

A.N
 $= 0.69$
